

# TriageTrak

U.S. National Library of Medicine

**TriageTrak** is a website for family reunification that is meant to be used when a large scale disaster, such as a typhoon, earthquake or other widespread event, occurs. When such an event occurs, individual hospitals that have installed the U.S. National Library of Medicine TriageTrak website (demonstrated here <https://triatetrak.nlm.nih.gov>) can help persons affected by the disaster. TriageTrak may be used, by hospital staff, to search for missing persons, or to report either missing or found persons.

The screenshot shows the TriageTrak website interface. At the top, there is a search bar with the text "Enter a name..." and a "Search" button. Below the search bar, there are several search results displayed in a grid. Each result includes a photo of the person, their name, status (e.g., Green, Red), age, gender, and update date. The interface also includes a sidebar with filters for "Status", "Gender", and "Age", and a "Search Using" section with a "Name" dropdown and a "Sort By" dropdown. The top right corner of the interface shows the TriageTrak logo and a "Login or Register" link.

## BASIC FEATURES:

- Report a missing or found person and their triage status.
- Search for a person by name or photo.
- Use sorting, filtering, and matching (both text and photos).
- Data is kept current.
- All posted data is not public, except where noted.

## ADVANCED FEATURES:

- Add GPS location into the reports.
- Search the reports by photo.
- Search and report with TriagePic® (app or application).
- Data protection and encryption for securing information.
